

DIMPLEDRAIN

EXTERIOR WATERPROOFING DRAINAGE MAT

Dimpledrain is a wall-height exterior waterproofing membrane for residential and light commercial applications.

The dimples formed into the sheet allow back side drainage to take place, providing a narrow break between the foundation wall and the membrane.

The membrane prevents ground water from making direct contact with the foundation wall thus providing a stand alone exterior moisture barrier with built in drainage.

Guaranteed performance – because the HDPE material is highly chemically resistant, it will provide protection in any climate and resist water and water vapor penetration.

- Stops ground water from making contact with foundation wall
- 100% recycled material
- Can be installed in any climate
- Sized for easy installation

Item #	Description
DM69600	6' 9" x 50' Roll
DM80600	8' x 50' Roll

Thickness	0.025"
Weight	1.73 oz./sq. ft.
Water Vapor Permeability	0.173 Gr./hr./sq. ft.
Tensile Strength	MD(47.7)/XD(51.8) lbs./in.
Elongation	MD(27.5)/XD(39.8)
Water Flow Rate	18 gal./min./ft.
Dimple Height	0.315" (8mm)
