

H₂Obliterator

WATER DAMAGE PREVENTION

The H₂Obliterator is a leak detection device that automatically shuts the water off at the appliance when a leak is detected.

Give your customers peace of mind by preventing potential water damage from another source – their water heater.

How Does It Work?

1. Installed at appliance
2. Sensor detects leak
3. Motorized valve closes immediately

Water damage obliterated!

Offer H₂Obliterator as an add-on option to your annual maintenance plan.
