

# CHANNEL-COVE

## WATER DIVERTER & MOISTURE BARRIER

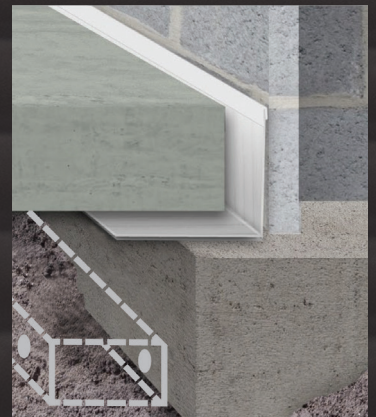

Richtech's Channel-Cove is a seamless water diverter that keeps water in the drain and off the basement floor. Fluted channels collect water from the wall and weep holes and direct it under the floor into any sub-floor drain system. The smooth white facing is attractive and can be trimmed with Channel-Cove cap molding for a clean, professional finish.

### MOLDINGS
