

E-Z Breathe® Garage Ventilation System

Your Solution for a Healthy Home

Protect your indoor air quality from dirty garage air by exhausting trapped toxins

Advantages of an EZ Breathe® Garage Ventilation System:

Exhausts Trapped Garage Toxins:

- Gas fumes
- Paint fumes
- Pesticides
- Fertilizers
- Carcinogens
- Benzene
- Carbon Monoxide
- Pollutants
- Toxins

What people are saying about the Ventilation System:

"I was very skeptical about this product, but I have to tell you that only two days after installing the EZ Breather Garage Ventilation System, I felt the air in our childrens' bedrooms smelled much fresher. Their bedrooms are above the garage and I had noticed a metallic smell up there before we had the system. Now that it's gone they are not coughing as much. Thank you, EZ Breathe, for helping to protect my family."

- J. Forrest, PA

Product Specifications

How the EZ Breathe Garage Ventilation System Works

The EZ Breathe Garage System draws contaminated air out of the garage and exhausts that dirty air to the outside, creating complete air exchanges and a much needed path of escape for the toxic garage air in accordance with the US EPA "Indoor Air Plus" guidelines for Healthy Homes.

Easy as 1 - 2 - 3

- 1 EXPEL dirty, contaminated air from garage - reducing natural absorption into the house
- 2 REPLENISH polluted garage air with fresh outdoor air, diluting airborne contaminants
- 3 VENTILATE the garage, creating air exchange in accordance with the US EPA guidelines

MODEL GV200

UNIT DIMENSIONS:

- Height: 9.65"
- Width: 12.8"
- Depth: 4"
- Weight: 5.5 Lbs
- Energy Consumption: 25 W
- Air Flow: 78 CFM
- Noise Level: 50dB
- Amperage: 0.28 Amp
- Voltage: 120 Vac
- ETL Control #3176995

Easy to Install. Engineered to Last.

The EZ Breathe Garage Ventilation System's quiet, efficient exhaust draws the polluted garage air through the intake vents and expels that air directly to the outside through the 6" duct provided.

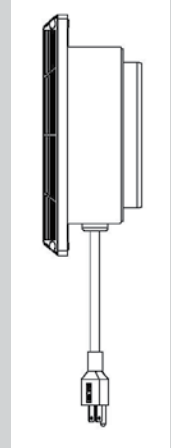

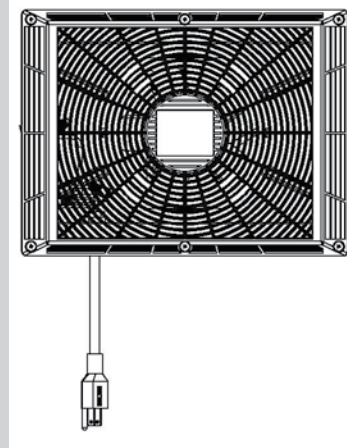

1. The EZ Breathe Garage Ventilation System is installed on an exterior wall - requiring a 6-inch exhaust hole.

2. The EZ Breathe louvered exhaust fan is mounted on the outside of the garage - just like

a dryer vent! Includes a fine mesh screen to protect from any pests entering.

3. The EZ Breathe Garage System can be mounted anywhere on the wall - We recommend at least 3' off of the garage floor

4. Set it and forget it control panel

EPA Indoor airPlus Program Requirements:

"5.6 Exhaust fan (minimum 70 cfm, rated for continuous use) installed in garage & vented to outdoors (controls optional)"

EZ Breathe Garage Ventilation fulfills this EPA requirement. EZ Breathe Garage Ventilation has a fan speed of 78 cfm. Automotive exhaust, and other fumes off-gassed by a car, lawn mower, fertilizers, etc. in a garage can accumulate to dangerous levels. In addition, if the garage is attached, those fumes will naturally be drawn into the home, unless garage ventilation is provided.
